End Date: March 2022
Status: UNDER OFFER

Project Overview

- Refurbishment of upgrades to existing infrastructure

Project Description

To refurbish the live holding facility; the replacement of the shed that houses live holding tanks which is over 40 years old and has deteriorated significantly.

This refurbishment will underpin and enhance the business in several ways. It will securely hold live product including rock lobster, banded morwong and wrasse.

The facility will also be used to show customers live product and educate them about the Tasmanian fishing industry; increasingly customers are interested in the fishing industry, the people working in the industry and how the food is sourced.

In addition, the facility can be used for wet processing of rock lobster, octopus and scalefish for value adding in the café.

The upgraded live facility will complement the existing business in helping to value-add Tasmanian seafood through the retail outlet The Lobster Shack Tasmania.

The Lobster Shack showcases Tasmanian seafood to local, interstate and international visitors. Specialising in locally caught southern rock lobster, octopus, fresh fish and oysters, The Lobster Shack has become one of the most popular and successful eateries on the east coast of Tasmania.
